PROFESSIONAL SUMMARY

Aspiring Full-Stack Developer with hands-on experience in Java, JavaScript, React, and modern web technologies, building scalable end-to-end applications with Spring Boot and RESTful APIs. Passionate about developing impactful, production-ready solutions, with growing expertise in Docker, Kubernetes, CI/CD pipelines, and continuous learning. Adept at designing microservice architectures and implementing secure, role-based systems that deliver seamless user experiences across web platforms.

SKILLS

Frontend: React.js, HTML/CSS, Tailwind CSS, Bootstrap, JavaScript
Backend: PostgreSQL, JWT, Microservices, Spring Boot
Tools: Git, VS Code, Postman
Other Skills: RESTful APIs, CI/CD Pipelines, Docker, Kubernetes, AWS
Soft Skills: Problem Solving, Analytical Thinking, Team Collaboration, Communication
Coursework: DSA, Operating Systems, Database Management Systems, Computer Networks, Object-Oriented Programming

TRAINING

(Bootcamp) Sharda University, Greater Noida, India **May 2025 – June 2025 Web Development & DSA Bootcamp**

- Full-stack training (HTML, CSS, JS, Node.js)
- Built a Beverage Ordering App with frontend-backend integration and solved 150+ DSA problems.
- Applied full-stack and DSA knowledge in a project-based environment; designed REST APIs with Node.js and integrated frontend-backend workflows, gaining hands-on exposure to production-ready web development practices.

PROJECTS

CampEase – Campus Navigation & Food Ordering System **Feb 2026 – June 2026**

- Built a full-stack campus navigation and food ordering platform using React, Java Spring Boot, and PostgreSQL, enabling students to locate facilities via an interactive map and place prepaid orders with real-time status updates.
- Implemented JWT-based authentication with role-based access control (students & vendors), a queue-management system, and an AI-powered chatbot recommending outlets by availability, ratings, and reviews.
- Designed a microservices-ready backend with Spring Boot RESTful APIs and a relational database schema optimized for concurrent vendor and student transactions.

Offline UPI Mesh Payment System **July 2025 – Aug 2025**

- Developed an offline UPI payment simulator using Java and Spring Boot with decentralized mesh-based transaction routing.
- Implemented RSA + AES-GCM encryption and idempotent transaction handling to ensure secure and duplicate-free settlements.
- Built REST APIs and a dashboard simulator to demonstrate packet forwarding, bridge synchronization, and concurrent transaction processing.

Real-Time Notification System with Event-Driven Architecture **Feb 2025 – May 2025**

- Spring Boot–based notification service using RabbitMQ for event-driven message delivery, designed for at-least-once delivery guarantees.
- Implementing Redis-backed idempotency checks to prevent duplicate notifications on message redelivery.
- Designing retry and dead-letter queue pipelines to handle failed delivery attempts with exponential backoff.
- Architecting a horizontally scalable WebSocket gateway using Redis for cross-node session routing.

EXTRA-CURRICULAR ACTIVITIES

- **Technovation Hackathon– [2025]** Participated in a 24-hour coding hackathon, collaborating with a team to develop an innovative tech solution. Worked on frontend, UI/UX using JavaScript, React, Firebase. Gained hands-on
- Experience in problem-solving, teamwork, and rapid prototyping
- **Smart India Hackathon** – Secured Top 50 in college.
- **Certifications**– Udemy (2024), Java Certification– Oracle (2025)

LEADERSHIP

- **Active Member**– TechNova Club
- Participated in coding events and workshops to enhance programming skills. Coordinated task distribution, brainstorming, and final project presentation

EDUCATION

Sharda University, Greater Noida, UP CGPA: 8.7/10 2023 - Present Bachelor of Technology in Computer Science & Engineering
